Summary

Frontend Engineer with an Information Systems background, experienced in building user-centric, production-ready web applications using React.js, Next.js, and TypeScript. Skilled in translating product requirements into responsive interfaces, integrating REST APIs, and collaborating across functions, with an adaptable engineering approach suited to broader full-stack responsibilities.

Education

Brawijaya University

Bachelor's Degree in Information Systems
Cumulative GPA

Malang, Indonesia
2023 - 2027 (Expected)
3.75/4.00

Work Experience

Frontend Engineer (Contract)

PT Akademi Competition

Remote
January 2026 - July 2026

Technologies: React.js, Tailwind CSS

- Spearheaded the initial frontend development of a production-ready web platform using React.js and Tailwind CSS, serving 1,500+ monthly active users with thousands of views across user and admin flows.
- Implemented end-to-end features including authentication, user-facing flows, and admin dashboard interfaces actively used in daily operations.
- Collaborated with backend and non-technical stakeholders to deliver features aligned with product requirements.

Projects

JALINUSA - Disaster Logistics Transparency Platform

Tech Stack: Next.js, TypeScript, Tailwind CSS, Web Speech API

Link : [Source Code](#)

- Developed voice-first and pictogram-based request flows using the Web Speech API, enabling survivors to report logistics needs without login or formal documentation.
- Built admin and public dashboards for request validation, multi-stage custody tracking, and real-time visualization of append-only ledger records.

LUMBERA - Cooperative FinTech Platform

Tech Stack: Next.js, Tailwind CSS, TypeScript

Link : [Source Code](#)

- Built user flows for member consent, Member Creditworthiness Score, and a verified financing data bridge supporting privacy-focused loan submissions.
- Created frontend views for verifiable ledgers and immutable audit logs to improve transaction transparency and fraud anomaly visibility.

IEEE UB Student Explorer

Tech Stack: React.js, Tailwind CSS, TypeScript, Inertia

Private Repository

- Translated Figma designs into high-fidelity, responsive UI components ensuring 1:1 visual accuracy across all devices.
- Developed CRUD features for a built-in content management system, enabling seamless updates for news, articles, and organizational announcements.

ARTERI - Competition Learning and CBT Platform

Tech Stack: React.js, Laravel, Tailwind CSS

Link : [Source Code](#)

- Built a production learning and CBT platform used in a live competition, combining structured learning materials with online examinations.
- Implemented anti-cheating controls including camera monitoring, enforced fullscreen, tab-switch detection, and a three-strike violation system.

IFL Chapter Malang - Organizational Website and Volunteer Registration

Tech Stack: React.js, JavaScript, Tailwind CSS

Link : [Source Code](#)

- Extended the existing organizational website by developing chatbot-assisted volunteer registration flows.
- Maintained and improved legacy frontend components, ensuring responsive behavior and consistent UI across existing and newly added pages.

IT Fest 2025 - Event Platform

Tech Stack: Next.js, Tailwind CSS, TypeScript

Link : [Source Code](#)

- Built responsive event platform components supporting 10,000+ page views.
- Integrated REST API to display real-time participant progress, submission status, and competition timelines.

Achievements

1st Place Winner - FIT Competition 2026 Hackathon

Universitas Kristen Satya Wacana

Frontend Engineer

July 2026

- Built JALINUSA for transparent disaster logistics during the critical first 72 hours.
- Developed voice-first request flows and public audit dashboards.

2nd Place Winner - Hackathon 9.0 TechnoScape 2026

Bina Nusantara Computer Club

Frontend Engineer

June 2026

- Built LUMBERA to transform manual cooperative records into secure, audit-ready workflows.
- Developed member consent, credit scoring, and immutable audit interfaces.

Organization Experience

Frontend Developer, Information Systems Division

Malang, East Java

Indonesian Future Leaders Chapter Malang

September 2025 - July 2026

- Built volunteer registration features with chatbot-assisted user flows to support the chapter's recruitment process.
- Maintained and extended existing frontend features while ensuring responsive and consistent UI across organizational pages.

Senior Staff, Information Technology and Publications Department

Malang, Indonesia

Keluarga Besar Mahasiswa Departemen Sistem Informasi

February 2025 - December 2025

- Developed two web platforms for the organization: the KBMDSI organizational profile website and the IT Fest 2025 competition platform, supporting participant registration and event operations.
- Mentored junior staff members in the Frontend Division through technical guidance, development support, and knowledge sharing on modern frontend practices.

Skills

Technical Skills: Requirement Analysis, REST APIs, GitHub, Figma, Vercel

Programming & Technologies: JavaScript (ES6+), TypeScript, HTML5, CSS3, React.js, Next.js, Tailwind CSS, Inertia.js

Languages: Indonesian (Native), English (Intermediate)
